

# 15-player test squads

10 IPL teams + 43 countries

## How to use this directory

1. Select IPL / Franchise or Country in the app.
2. Select the exact team or country named on the squad page.
3. For IPL, select a different opponent team.
4. Choose Enter numbered names and paste the player-name list.
5. Check the matched count, set the venue, and generate Best XI.

## What these squads represent

Names come directly from the local player and membership files.

These are historical test pools, not official current-season squads.

Players were prioritized by recorded T20 experience, with a feasible 11-player role composition selected first where the data permits.

Feasibility uses the app optimizer, including the IPL overseas cap.

This checks squad constraints, not every possible match prediction.

## Limited country pools

Countries with fewer than 15 unique eligible names list all available.

A warning identifies squads that cannot produce a valid XI.

Do not mix names from another team or country to fill a short squad.
